

The following illustrated steps can be used as a general guideline:

*Divide into areas for sampling on basis of slope, type of plants grown, etc.*

*Take soil from at least 10 places in each area to obtain a representative sample.*

*Remove one pint for laboratory sample. Label with identification number. Sample boxes are available from your county agent.*

*Sample to depth of 2" -3" for turf and 6" for cultivate beds.*

*Mix soil thoroughly.*

*Fill out sample submitting form and take it to your county extension office or mail to LSU AgCenter Soil Testing Laboratory for analysis.*
