

LOUISIANA SUMMARY

AGRICULTURE & NATURAL RESOURCES

2025

Agriculture: Backbone of Louisiana's Economy

Agriculture, forestry, fisheries and wildlife enterprises remain fundamental to Louisiana's economy and rural communities. This publication provides a comprehensive summary of the production and farm-gate value of commodities produced across all parishes in 2025. The estimates presented here are the result of collaborative efforts by agents and specialists of the Louisiana Cooperative Extension Service, along with numerous public and private partners. Together, these data reflect the breadth and diversity of Louisiana's agricultural industry and its continued importance to the state's economic stability and growth.

The 2025 production year presented a markedly different set of challenges compared to both 2024 and the extreme conditions experienced in 2023. While Louisiana largely avoided the widespread drought and excessive heat that defined the 2023 season, weather variability continued to play a critical role in shaping production outcomes. Periods of excessive rainfall in some regions disrupted field operations, delayed planting for certain crops and contributed to disease pressure throughout the growing season. At the same time, more favorable moisture conditions supported improved yield potential for several commodities relative to recent years. As is often the case in Louisiana agriculture, the impacts of weather were highly variable across regions and commodities, contributing to uneven production outcomes across the state.

Despite these mixed production conditions, total farm-gate value trends in 2025 reflect the combined influence of both production changes and shifting market conditions. The total value of plant enterprises declined compared to 2024, falling from approximately \$4.5 billion to \$4.26 billion, a reduction of just over 5%. This decline was driven largely by reduced acreage and production in key row crops, along with continued downward pressure on commodity prices. Soybeans experienced one of the most significant year-over-year declines, with farm-gate value falling by more than 33%, reflecting both reduced harvested acreage and lower prices. Cotton also saw substantial reductions in acreage and value, with total farm-gate value declining by nearly 38%.

In contrast, some plant commodities showed notable gains. Feed grains, particularly corn, experienced strong expansion in both acreage and total value, with corn farm-gate value increasing by more than 75% compared to 2024. Peanuts and certain specialty crops also posted gains, supported by both increased production and favorable market conditions. However, these increases were not sufficient to offset broader declines across major row crop systems.

The rice and sugarcane industries — two of Louisiana's most important agricultural sectors — faced contrasting conditions in 2025. Rice yields improved modestly, but lower market prices resulted in a decline in overall farm-gate value of approximately 15%. For sugarcane, slight increases in acreage and production were observed; however, lower raw sugar prices reduced total farm-gate value by more than 5%. These trends highlight the significant role that price fluctuations continue to play in determining overall farm income, even in years with stable or improving yields.

The fisheries and wildlife sector experienced an overall increase in value in 2025, rising by more than 11% compared to the previous year. Aquaculture was a primary driver of this growth, with farm-raised crawfish production rebounding sharply. Farm-raised crawfish farm-gate value increased by over 36%, supported by improved yields following reduced production in prior years. However, this recovery was not uniform across all fisheries, as some wild-caught and marine species continued to face production challenges and price pressures.

Animal enterprises also contributed positively to overall agricultural value in 2025. Total farm-gate value for animal agriculture increased by just over 5% compared to 2024. Strong cattle markets were a key factor, with total cattle and calf

value increasing by nearly 18%, driven primarily by higher prices across multiple weight classes. Poultry enterprises also expanded in value, while dairy and small ruminant sectors experienced more modest changes.

Forestry continues to represent a stable and significant component of Louisiana's natural resource economy. In 2025, total forestry value increased slightly, rising by less than 1% compared to 2024. While this sector did not experience the same degree of volatility as other industries, it remains highly dependent on long-term market cycles and housing demand, both of which influence timber prices and harvest activity.

Overall, the total farm-gate value of Louisiana agriculture in 2025 reflects a year of transition and adjustment. While some sectors experienced recovery and growth, others were constrained by reduced acreage, weather disruptions and continued price declines. These mixed outcomes underscore the dynamic nature of Louisiana agriculture and the wide range of factors that influence production and profitability from year to year.

Beyond production agriculture, it is important to recognize the broader economic contributions generated through value-added activities such as processing, transportation, and marketing. These sectors substantially expand the overall economic impact of agriculture, forestry and fisheries in Louisiana, supporting jobs and economic activity in both rural and urban communities across the state.

For many Louisiana families, agriculture is more than an economic driver — it is a way of life rooted in tradition, resilience and innovation. Producers continue to navigate an increasingly complex environment characterized by volatile markets, rising input costs, and unpredictable weather patterns. These challenges reinforce the importance of research-based solutions and educational outreach provided by the LSU AgCenter.

Through the combined efforts of the Louisiana Cooperative Extension Service and the Louisiana Agricultural Experiment Station, the LSU AgCenter remains committed to supporting producers, agribusinesses and communities across the state. By advancing research, delivering practical education and fostering innovation, we strive to ensure the continued strength and sustainability of Louisiana agriculture for generations to come.

Louisiana Summary

Agricultural and Natural Resources

2025

The statistical information in this summary was compiled from estimates made by extension agents of the LSU AgCenter after consulting with agricultural agency representatives, agricultural and agribusiness leaders, and others and after study of various reports and resource materials. State specialists with the LSU AgCenter checked parish-level data for specific commodities to ensure accuracy and consistency of all production information. Final review of data was conducted by LSU AgCenter agricultural economist and project director Kurt Guidry in consultation with external sources, including state and federal statistical agencies. Any inquiries about the data in this publication should be directed to Kurt Guidry in the LSU AgCenter's Department of Agricultural Economics who oversees the process of gathering all information for the Louisiana Summary.

Although this material is reasonably accurate and can be used for planning and other general informational purposes, this is not the official document of agricultural data for the state. Official statistical data are gathered, summarized and published by the U.S. Department of Agriculture's National Agricultural Statistics Service, Delta Regional Field Office, 10800 Financial Centre Parkway, Suite 110, Little Rock, Arkansas, 72211. Reproduction or publication of information in this summary should acknowledge the Louisiana Summary as the source but indicate the unofficial nature of the statistics.

Gross farm value was calculated for each commodity, which in some cases included a value from natural resources and consequently may not represent income to farmers. Gross farm values were calculated using calendar-year, market-weighted, state-level average prices, when available. When state-level price information was unavailable, price information was used from adjacent states (Texas, Arkansas or Mississippi) or the nation. Primary sources for prices were USDA National Agricultural Statistics Service, USDA Agricultural Marketing Service and USDA Economic Research Service. The gross farm value is an indicator of the commodity's contribution to economic activity in the state but is not an indicator of farm profits. Production costs greatly affect profit (or loss) for all commodities. Even when gross income increases over previous years, corresponding increases in production costs may decrease farm profits.

In the state summaries, the value added in cleaning, processing, packaging, marketing and transporting commodities is an estimate of the total contribution of agriculture and natural resources to the state's economy. The state summary may not be an exact summation of all parish reports as adjustments may occur due to changes in average prices received or to accommodate information from other sources. In each parish table only commodities that were of commercial economic value in that parish this year were listed. In some instances, the number of producers or the number of acres in a parish were not available. An asterisk was used to avoid releasing confidential information when too few producers were present for that commodity. Within some commodity groups, such as grains, fruits and commercial vegetables, the total number of producers has been omitted because some producers grow several different crops within the group. Adding together the producers of individual crops would not give a true total for the group.

Animal Enterprises

Gross farm income for all animal enterprises was \$2.19 billion for 2025, up 5.1% from \$2.08 billion in 2024. Value-added was nearly \$1.12 billion for 2025, up from \$1.06 billion in 2024. Total value of all animal enterprises in the Louisiana economy was \$3.31 billion, up 5.2% from \$3.14 billion in 2024.

Beef Cattle

Louisiana's beef cattle inventory showed a minimal decline in 2025 compared to 2023 and 2024. Record high cattle prices continue to result in higher culling and decreased replacement female retention throughout the state and country. This is reflected in both lowered cow inventories and a reduction in number of beef cattle producers. Beef cow inventory numbers in Louisiana for 2025 totaled an estimated 469,715 head, compared with 498,496 in 2024. The number of beef cattle producers remained somewhat stable, decreasing from 10,610 in 2024 to 10,213 in 2025. For additional reference, Louisiana had 11,472 beef cattle producers in 2022 prior to the extreme drought and heat experienced in 2023, as well as the continued record prices driving increased culling rates.

Louisiana remains primarily a cow-calf state, with most of the beef cattle marketed weighing less than 700 pounds. Despite a lower inventory, consistently high market prices resulted in gross farm value increases across many classes of beef cattle. The gross farm value of 182,589 steer calves sold in 2025 was an estimated \$324.3 million, a decrease of approximately 12,916 head but an increase of \$63.2 million from the \$261.1 million reported in 2024. The estimated gross farm value of 157,215 heifers sold in 2025 was \$247.5 million, a decrease of 9,438 head but an increase of \$53.1 million from the \$194.4 million reported in 2024.

For 2025, the sale of yearling cattle weighing 600 to 800 pounds per head remained relatively steady at 50,668 head. These sold for an estimated \$102.1 million, a significant increase of \$26.8 million compared to 2024.

The number of cow-calf pairs and cull cows marketed continued to decrease due to the herd reductions seen in the previous two years. In 2025, 22,573 pairs sold for a gross value of \$61.4 million. This is a decrease of 9,482 pairs and \$4.3 million from the previous year. Like the cow-calf pairs, decreases were seen in the number of cull cows marketed. For 2025, 39,362 head of cull cows sold, for a gross value of \$61.9 million. That is a decrease of 10,265 head and a gross value decrease of \$15.1 million compared to 2024. Cull bulls likewise showed decreases in the number marketed in 2025 compared to 2024. However, the gross value of bulls marketed in 2025 increased compared to 2024. In 2025, a total of 3,900 head of cull bulls sold for a gross value of \$10.1 million compared to 5,346 head selling for \$9.1 million in 2024.

All classes of beef cattle marketed had a total gross farm value of \$803.14 million in 2025. This increased \$120.6 million compared to 2024.

Dairy

While milk production was reported by 11 parishes in 2025, only eight parishes would be considered to have commercial sized operations with the other parishes being primarily related to small dairy herds for junior livestock shows. Of the eight parishes with commercial sized operations, three parishes in the southeastern part of the state accounted for 87% of the herds, 88% of the cows and over 90% of the milk produced.

Overall, the number of dairy operations increased from 52 in 2024 to 54 in 2025. However, if just the eight parishes with commercial sized production are considered, the number of operations decreased from 52 in 2024 to 46 in 2025. The number of milking cows decreased from 6,811 head in 2024 to 6,618 head in 2025. Total milk production increased from 91.2 million pounds in 2024 to nearly 93 million pounds in 2025. An increase in milk production of nearly 1.96% was more than offset by a decrease of 4.96% in the price of milk resulting in a decrease in the gross farm value of milk by \$682,916 or 3.09% from the previous year.

Significant increases in cattle prices in 2025 pushed the value of cull cows, bred heifers, mature cows, breeding age bulls and calves to roughly \$5.79 million, over 53% higher than 2024. The total value of milk and animal sales to Louisiana dairy producers was \$27.2 million. Value added contributed over \$43.8 million more. The total economic contribution from dairying in Louisiana, including milk sales, animal sales and additional processing was about \$70.9 million, an increase of an increase of \$3.4 million compared to the previous year.

Another component of the state's dairy industry has been the production of goat's milk. While small compared to the dairy cattle industry, dairy goat production has continued to be a viable industry in the state. In 2025 dairy goats were raised by 194 producers. A total of 1,823 does were reported to have been milked during 2025 producing about 830,006 pounds of goat milk. Many of these producers use goat milk to make soap, cheeses, lotion, cheesecakes and pies. These products vary in price depending on the producer and the geographical location where they market their products. The gross farm income of the dairy goat industry was estimated at \$498,003 in 2025, down from \$709,634 generated in 2024. The largest reason for the decrease in the gross farm income was a significant downturn in production.

The total economic impact of the dairy industry for both cattle and goats in 2025 was over \$72 million.

Horses

The horse industry continues to be a significant component of the agricultural economy in Louisiana. The horse industry has traditionally been able to be categorized into three sectors: racing, show or competition, and recreational. In terms of number of horse owners, the breakdown of the industry in 2025 into these three sectors was 10% racing, 13% show or competition, and 77% recreational. In 2024, the breakdown of the horse industry by percentage of total gross farm value generated by each sector was 11% racing, 14% show or competition, and 75% recreational.

The state's racehorse industry in 2025 involved 2,000 breeders who owned 5,252 mares that produced 4,953 foals that sold for \$27.5 million. Breeders also owned 688 stallions that were bred to 5,213 mares, generating income from stud fees of \$13 million. The total gross farm value generated from racehorse production was \$40.5 million. An additional 1,902 racehorse owners had 8,975 racehorses in training or on the track in Louisiana, with a gross farm value of \$89.7 million. The gross farm value of the entire race sector (owners' and breeders' activities) of the horse industry in 2025 was \$130.3 million, not including receipts or fees from racing events or gaming.

The show and competition horse industry (horse shows, barrel racing, cutting, roping, team penning and others) includes 1,577 breeders who own 5,208 mares that produced 4,664 foals that sold for \$18.6 million during 2025. These breeders owned 589 stallions that bred with 3,098 mares, generating \$4.6 million in income from stud fees. The total income generated from show and competition horse production was \$23.2 million. Another 3,183 owners competed on their 12,556 horses, which had a gross farm value of \$125.5 million. The total gross farm value of the show and competition sector of the horse industry was \$148.8 million in 2025, not including the income generated from showing and associated activities.

A large portion of the horse industry, both in terms of owners and horses, is recreational. Horses have been used for comfort, exercise and enjoyment for quite some time. Approximately 9,988 recreational horse owners in Louisiana bred 21,026 mares and sold 14,814 foals during 2025 for \$16.3 million. These horse enthusiasts owned 1,025 stallions that were bred to 4,229 mares, generating income from stud fees of \$2.1 million. The total income from production in the recreational horse industry was \$21.6 million during 2025. Another 18,972 recreational horse owners have 42,266 horses valued at \$105 million — making the total economic contribution of the recreational horse industry \$124 million in 2025.

There were a total of 97,588 horses in Louisiana, owned by 37,622 people, with a gross farm value of \$403.2 million in 2025.

In addition to the estimates of gross farm value and value-added activities, there are other potential impacts of the horse industry to the state's economy. First, the average horse owner has been reported to spend about \$4,000 to \$6,000 annually

on items such as feed, tack, equipment, veterinary supplies and medicines. Second, the four racetracks in the state employ a large number of people and have been reported to generate expenditures of over \$1 billion annually. Finally, the show and competition industry conducts numerous events and activities each year and is estimated to generate \$200 million annually in expenditures. The American Horse Council suggests that the total economic impact of horse production and these related activities like horse racing and competitions is in excess of \$3 billion annually for the state of Louisiana.

Poultry

Broilers and Eggs

Poultry production continues to be the largest animal agricultural industry in Louisiana and is second only to forestry in total economic value for all agricultural commodities. In 2025, 474 Louisiana growers (small producers and commercial operations) produced nearly 1.17 billion pounds of broiler meat with a gross farm value of \$827.6 million. Broiler production was up over 12% in 2025 from the 1.04 billion pounds estimated for 2024. While prices slightly waned, the slightly higher production increased the gross farm value to \$827.6 million from the \$773.8 million in 2024. Commercial broilers are produced in 11 parishes: Bienville, Claiborne, Jackson, Lincoln, Natchitoches, Ouachita, Sabine, Union, Vernon, Webster and Winn.

While broiler production is far and away the largest component of the poultry industry in the state, there are several other components that positively contribute to the state's economy. A total of 144 breeder flock producers in 2025 produced more than 10 million dozen hatching eggs with a gross farm value of \$35.5 million. A total of 81 pullet producers produced nearly 1.1 million pullets with a gross farm value of \$22.6 million. Finally, a total of 1,019 egg producers (small producers and commercial operations) had a total table egg production value of over 18.5 million dozen eggs valued at \$62.8 million.

When all the facets of the poultry industry are combined, the total gross farm value was estimated at nearly \$948.7 million in 2025, up roughly 5.4% from the nearly \$900 million in 2024. Increases in broiler production coupled with increases in the prices for edible eggs and breeder eggs, all helped push gross farm value higher in 2025. Value-added activities associated with poultry production added an additional \$924.9 million in economic activity in the state, bringing the total economic impact of the poultry industry to \$1.87 billion in 2025.

Quail

Quail production in the state generally consists of smaller operations reaching niche markets. In 2025, a total of 21,570 quail were estimated to be produced and sold by 45 producers resulting in a gross farm value of \$97,065. Value-added activities associated with quail production provided an additional \$10,677, bringing the total economic contribution of the quail industry to \$107,742 in 2025.

Rabbits

The production of rabbits for meat and exhibition involved 475 Louisiana producers during 2025. The rabbit industry produced a total estimated 48,662 pounds for sale in 2025, generating a total of \$188,858 in gross farm income. Of those totals, 28,581 pounds of production were from fryers and the remaining 20,081 pounds were from does. When the value-added activities of \$19,830 are combined with farm level income, the total economic impact of the industry in 2025 is estimated at \$208,688. This was a decrease of roughly \$60,000 from 2024.

Sheep and Goats

Sheep

Sheep production in Louisiana remains stable across the state. Sheep, lambs and wool were produced by 644 producers in 44 parishes across the state, compared to 557 producers in 2024. Similarly, ewe inventory slightly increased in 2025 from 7,163 to 7,476 in 2025. The total number of lambs marketed (slaughter, feeder, stocker and club/show lambs) was estimated to be 8,050 head, representing a 4.7% increase compared to the previous year. An estimation of 936 cull sheep were sold in 2025 remaining consistent with 2024 levels. Conversely, wool production roughly declined 58% from 8,816 pounds produced in 2024 to 3,692 pounds in 2025. The strong correlation between a stable ewe inventory and the significant reduction of wool production further indicates the growing popularity of hair sheep across Louisiana. The total gross farm value of the sheep industry is appraised at \$2.14 million for 2025, up from \$1.7 million in 2024. This value is largely driven by greater livestock market prices rather than significant herd expansion. Growth within the sheep industry is supported by emerging production systems such as diversified livestock enterprises or integration of sheep to control vegetation beneath solar energy panels. While statewide production is minimal, regional concentration of production particularly in Moorehouse, Jefferson Davis and Vermilion parishes serve as key areas of sheep production.

Goats

The Louisiana dairy and meat goat industry for 2025 consisted of a combined total of 13,468 head supported by 194 dairy goat producers and 1,110 meat goat producers statewide. These operations were distributed across 57 of Louisiana's 64 parishes.

In 2025, approximately 1,823 head of dairy goats produced a total of 830,006 pounds of milk compared to 1,541 head producing roughly 1.18 million pounds of milk in 2024. Gross farm value fell to an approximate appraisal of \$498,000 for 2025, compared to an appraised value of \$709,634 in 2024.

Unlike dairy goat production, meat goat production throughout Louisiana has remained relatively stable. Breeding-age meat doe inventory was up marginally from the previous year at 11,645 head. A total of roughly 11,906 goats were marketed (slaughter, stocker, club/show) with an additional 1,471 cull goats in 2025. Both remain consistent with 2024. Stocker goat sales totaled an estimated 4,267 head and slaughter goats totaled approximately 6,068 head, both with appraised values of \$916,691 and \$1,074,339 respectively. Although herd inventory has remained stable, total farm value has decreased for a second consecutive year, decreasing 6.37% from \$3.03 million in 2024 to \$2.84 million in 2025.

Swine

The Louisiana swine industry is primarily comprised of relatively small producers. In 2025, a total of 332 producers were estimated to have a total inventory of 2,238 sows with an average sow inventory per producer of between six and seven sows. Other than servicing a local or niche market, most of the swine production in the state is targeted to the show/club pig market. In 2025 a total of 1,405 show pigs were estimated to be sold with a gross farm value of \$562,000, representing roughly 33% of the total gross farm value generated by the swine industry. Sales of feeder pigs, slaughter hogs, and culls represent the remaining 67% of the total gross farm value generated by the industry. In 2025, 4,311 feeder pigs were sold for an estimated value of \$186,166. Sales of 3,286 slaughter hogs generated a gross farm value of \$763,969 while the sale of 985 cull animals (sows and boars) generated a gross farm value of \$190,735.

When added together, the gross farm value of all classes of swine is estimated at \$1.70 million for 2025, up from \$1.67 million in 2024. Value-added activities associated with the swine industry are estimated at \$208,785, bringing the total economic impact of the industry to the state economy to \$1.91 million, up from \$1.88 million during the previous year.

Exotic Animals

Exotic animal enterprises represent a relatively small segment of Louisiana's overall agricultural industry. In 2025, the number of producers statewide was estimated at 63, an increase from 58 in 2024. With the increase in the number of producers reported, the total number of animals marketed increased slightly, rising from 1,756 in 2024 to 2,245 in 2025. Driven by both increased sales volume and higher prices per animal, the total value of exotic animal production in 2025 was estimated at \$1.35 million, compared to a projected value of \$875,300 in 2024.

Fisheries and Wildlife Enterprises

Total farm value of all fisheries and wildlife enterprises during 2025 was \$912.96 million, up roughly 11.5% from the \$818.61 million in 2024. Value-added in 2025 was \$612.2 million, up from \$564.5 million in the previous year. Total value of all fisheries and wildlife enterprises to the Louisiana economy for 2025 was \$1.53 billion, up over 10.2% from the \$1.38 billion in 2024.

Aquaculture

Louisiana has long been recognized for supporting one of the most diverse aquaculture industries in the United States. Species and products such as crawfish, catfish, alligators, oysters, tilapia, baitfish, redbird, hybrid striped bass, soft-shelled crawfish and crabs, ornamental fish, baby turtles, a variety of freshwater game fish and other minor species all have been commercialized successfully. Louisiana's producers are among the leaders in the nation in crawfish, oyster and alligator sales.

Farm-raised crawfish continued to be the state's most valuable aquaculture sector in 2025. Growth in demand, both within the state and regionally, has continued to foster expansion of acreage and production, and crawfish aquaculture has increasingly been incorporated in other farming operations in recent years as producers look to offset adverse conditions in rice markets. In 2025, industry observers noted an encouraging rebound from the heat- and drought impacted 2024 season. Estimates from the field in 2025 indicated farm-raised crawfish production occupied almost 386,000 acres, up 5% from the previous year. Total harvests exceeded 215 million pounds, a significant year-over-year increase of 68%, and gross farm value was \$353.4 million, up 37%.

A total of 293,815 farmed alligators were harvested in Louisiana in 2025, up from the prior year's harvest of 267,067, with an estimated gross farm value of \$62 million. Farm raised alligator prices are influenced by a number of factors, including supply and demand imbalances in domestic and world markets, foreign competition from various crocodile and caiman suppliers, and climate impacts on hatchling availability in Louisiana's coastal habitats.

Oyster production information reported in this summary represents a one-year lag. Information on Louisiana oyster harvests and sales is compiled by the Louisiana Department of Wildlife and Fisheries and provided to the National Marine Fisheries Service, but the final compilation of the data is not available until the middle of the following year. Oyster sales in 2024 rose to 1,097,264 sacks valued at \$54.5 million, reflecting an increase of 14.4% and a reduction of 14.6%, respectively, from the previous year.

Following modest increases in farmed catfish production in recent years, in 2025 harvests totaled only 6.8 million pounds valued at \$7.5 million, reflecting decreases of 57.5% and 57.6%, respectively compared to the prior year. Although numerous other segments of Louisiana's aquaculture industry continue to provide positive economic impacts to the state, taken together they are significantly smaller than those of crawfish, alligators, and oysters. Pet turtle hatchling sales of high-value species to foreign collectors and enthusiasts has helped maintain several producers in the market. Fish bait and minnow production continue to evolve to meet the demands of recreational fishers, with out-of-state competition and mergers/acquisitions throughout the industry imposing significant constraints on profitability. Other Louisiana aquaculture species currently include game fish fingerlings, ornamental fish, soft-shell crabs and crawfish, and several other minor species.

Examining the economic impact across commercial enterprises indicates that the total gross farm value of Louisiana aquaculture in 2025 was approximately \$482 million, which was nearly 21% higher than the previous year's total. Value-added multipliers associated with aquaculture value chains (processing, boiling, shucking, packaging, restaurants and retail sales) contributed an additional \$325 million to the state's economy, bringing the total impact of Louisiana's commercial aquaculture to \$807 million in 2025. Additionally, approximately 140,000 private ponds are found throughout Louisiana, totaling some 46,000 acres. Although these private ponds are not included in the 2025 state total for aquaculture, they do

have positive economic impacts for recreation and enhancement of property values, even more so than home gardens. These impacts have been estimated to exceed \$72 million for 2025.

Fisheries

The harvest of freshwater and marine finfish and shellfish in Louisiana largely contributes to the state's agricultural economy. Fishery landings are recorded by two government agencies, both state and federal. The Louisiana Department of Wildlife and Fisheries receives monthly reports from the initial buyers (processors, dealers, etc.) who are required to record every transaction via trip tickets. Species weights and dockside sales values of the landings are reported for all commercially harvested species. National Oceanic and Atmospheric Administration (NOAA) – Fisheries is also responsible for estimating fisheries landings, using both regional NOAA – Fisheries data collectors and Louisiana Department of Wildlife and Fisheries (LDWF) reports. The information reported here is from those two cooperating sources. All this data is provisional and subject to change.

The freshwater and marine fisheries data presented in the report this year (2025) reflect the calendar year 2024. The one-year lag is necessary to ensure data accuracy. Real-time reports on fisheries landings are not available until four months after the fact, and final data often runs six to twelve months behind. Estimating landings for the second half of the year based on landings reports from the first half is inaccurate. This method of reporting fisheries landings data has been in place since the 2004 Louisiana Summary; data prior to that volume may not be directly comparable to the data reported since 2004 because of using the different estimation methods. To compare state-level landings for years prior to 2004, on a calendar-year basis, please consult the NOAA – Fisheries website. Beginning in 2020, menhaden were included in parish-level marine finfish fisheries statistics when historically they have been kept separate. The volume of menhaden catch can represent up to 99% of the marine finfish landings category but only 90% of the value. As such, we report the entirety of the landings category; however, in an attempt to contextualize the state-level landings, we have elected to report the proportion of species-level catch NOAA – Fisheries marine fisheries data although there are minor discrepancies in the landings and landings value.

One final caveat is that parish totals for fisheries landings will not equal the state total because of legal confidentiality requirements. When there are fewer than three sources in a parish that report landings of a fisheries commodity, the number of landings cannot be publicly released by LDWF without breaking confidentiality requirements. There may also be parishes reported in this volume for which no landings or values were provided by either of those agencies but for which there was catch. Furthermore, fisheries landings are reported for the parish in which the fish are offloaded — not the parish in which the boat and its crew may be domiciled or the parish where the catches were made. However, producer estimates are based on commercial licenses which are based on the fishermen's domicile.

2024 Impacts

In 2024, shrimp landing prices were their lowest in 15 years across all size classes and species of shrimp in the northern Gulf region, continuing a decline from 2023. This was especially pronounced in Louisiana with landing prices reported across the state at less than \$1.00 per pound at the shrimp's largest size grade which decreased further as the shrimp got smaller. This drop in price is presumed to be the high volume of imported shrimp in United States markets. Of the shrimp consumed in the U.S., approximately 8%–10% is wild caught in the U.S., with many of the imports being supplied by through aquaculture. It is plausible that there have been spillover affects into other fisheries, additional labor, increased fishing effort, etc., but it has not been measured.

2023 was also a year of exceptional drought for most of the state. In 2023 according to the University of Nebraska's drought monitor, during the peak almost 85% of Louisiana was in "extreme drought" while 58% of Louisiana was in "exceptional drought." This drought resulted in widespread impacts to the crawfish industry, resulting in a disaster declaration in 2024 (Executive Order JML 24 – 30). As such the landings for wild-caught crawfish in 2024 were one-third (31%) of the harvest in 2023.

Freshwater Fisheries

The freshwater finfish (in order of weight landed) are blue catfish, buffalo, non-shad herrings, gizzard shad and channel catfish. On a whole, freshwater finfish hold a lower commercial value than marine finfish. Total freshwater finfish value has decreased by roughly 12% from 2023 to 2024. Landing values in 2023 were \$5.4 million for 12 million pounds whereas landing values in 2024 were \$4.7 million for 11.1 million pounds. Landings marginally decreased in 2024 by about 900 thousand pounds and the price per pound (\$0.43) was just \$0.02 lower in 2023. The total number of freshwater finfish producers decreased by 117 in 2023 from 1,486 to 1,369. In most cases, freshwater fish are less valuable than marine fish (excluding menhaden), and on a whole, the freshwater finfish fishery (\$4.7 million in 2024 landings) is 3.6% of the marine finfish fishery (\$126 million in 2023 landings).

Most of the parishes with wild crawfish landings are within the Atchafalaya Basin, aside from St. Tammany, where inflows from both the Mississippi and Red Rivers are controlled by the U.S. Army Corp of Engineers. Wild crawfish compete with the farm raised crawfish in the markets and wild volumes are largely constrained by the floodwater events in the Atchafalaya basin. The difference is minimal; however, wild crawfish tend to be bigger in size and have a slightly different flavor due to their diet. In 2024, wild crawfish landings were down 69% from 2023 at 3.4 million pounds compared to 11 million pounds. Value was 54% lower in 2023 at \$6.8 million. This drop in value was due to the unprecedented drought affecting the crawfish which raised the average price per pound to \$1.99 in 2024 compared to \$1.35 in 2023. The number of wild-caught crawfish producers in 2024 was 1,052 compared to 1,140 in 2023.

Value in landings from the freshwater fisheries sector were much lower in 2024 at \$11.5 million compared to \$20.4 million in 2023.

Marine Fisheries

Marine finfish landings for food are varied and complex, with 102 different species (including species with confidential landings) being landed for a total of 574 million pounds in 2024. This was a 22.2% decrease from 2023, when 739 million pounds of marine finfish were landed in Louisiana. The value of marine finfish landings in Louisiana in 2024 was \$134 million, which is an increase from 2023 when landings were valued at \$122 million. With the exclusion of menhaden, the top 5 landed species were black drum, red snapper, sheepshead, yellowfin tuna and vermilion snapper. By value, (also, excluding menhaden), the top five species were red snapper, black drum, yellowfin tuna, yellowedge grouper and vermilion snapper. The aggregate price per pound for marine fish was \$0.23 which largely represents the price per pound for menhaden. This price was an increase from 2023 where the aggregate price per pound was \$0.17. The low price per pound reflects the value of menhaden as a non-food fish. While this fish is too small and oily to eat, it is used in a variety of different ways including fertilizers, animal feeds, omega-3 dietary supplements, cosmetics, as well as bait. The prices of these products are a function of the world supply of oils and meals.

In 2024, 7.1 million pounds of oysters were harvested by 408 fishermen, or about 1 million sacks. This is a 14.4% increase in landings from 2023, where 6.2 million pounds were landed. In 2024, the price per pound for oysters was much lower at \$7.67 (\$49.66 per sack), compared to \$10.29 (\$66.58 per sack). To calculate prices per sack, an assumption of 6.47 pounds of shucked oyster meat per sack was used. The gross value of oysters harvested in 2024 was \$54.5 million, a decrease of 14.6% from \$63.8 million in 2023.

Louisiana hard crab landings usually range from 40 to 50 million pounds annually made up of almost 100% blue crab with less than 0.1% of stone crab claws. Blue crab landings were 40.1 million pounds, fished by 1,665 license holders and valued at \$79.8 million in 2024. This was a 10.7 decrease in landings from 44.9 million pounds and an 11.2% decrease in value from \$80.1 million in 2023.

Peeler or buster crabs are blue crabs that are close to molting their shell. These crabs are sold to soft shell facilities to produce soft shell crab. For many years now, the soft-shell industry has been in decline. In 2024, 5,146 pounds of soft shell were produced valued at \$53,469.

Louisiana shrimp landings in 2024 consisted of four species: white shrimp, brown shrimp, Atlantic seabob shrimp, and pink shrimp. Historically, Louisiana shrimp harvest landings and values have been split between white shrimp and brown shrimp (about 50%) with a small fraction of landings represented by pink shrimp and seabobs (less than 1%). In 2024, the proportion of white shrimp to brown shrimp landed was skewed to a majority white shrimp (88%) with only 14% of the shrimp landings comprised of brown shrimp. In 2024, the aggregate shrimp landings were 60.9 million pounds valued at \$60.3 million. This was a decrease in landings from 2023 by 16.7% from 73 million pounds, and a slight decrease in value (0.9%) from \$60.8 million. The price per pound was 17% higher in 2024 (\$0.99 per pound) relative to \$0.83 per pound in 2023.

In 2024, marine fisheries landings (shrimp, crabs and commercial finfish) in Louisiana were valued at \$265.1 million, a decrease from \$267.9 million in 2023.

Fur

As reported by the Louisiana Department of Wildlife and Fisheries, the total value of the 2024–2025 furbearer harvest was estimated at \$66,330, down from the estimated total value of \$143,264 reported in 2023–2024. The total number of trapping licenses sold decreased from 2,692 reported in 2023–2024 to 2,555 reported in 2024–2025. The total number of pelts sold in 2024–2025 was 5,591, down from 6,297 pelts sold in 2023–2024. Nearly 90% of all pelts sold were harvested from beaver (2,885), raccoon (1,634), and otter (813). The average price paid per pelt in 2024–2025 was \$11.11, down sharply from \$22.73 in 2023–2024. The average price paid per pelt across species ranged from a low of \$0.50 per pelt for muskrat to a high of \$43.70 per pelt for bobcat.

The total number of nutria harvested under the Coast-wide Nutria Control Program during the 2024–2025 season was 357,015, which was down slightly from 401,312 harvested in 2023–2024 and compares to the largest harvest season of 2009–2010 when 445,963 nutria were harvested. When the \$6 per nutria paid as part of the CNCP is combined with the value of nutria pelts sold, the total value of the nutria was estimated at \$2,142,210, down from \$2,407,872 in 2023–2024.

Hunting Lease Enterprises

The economic value of recreational hunting in Louisiana can be estimated, in part, by the income generated through hunting lease enterprises. During the 2024–2025 hunting season, an estimated 6,639 landowners leased property for hunting, up from 5,188 during the 2023–2024 season. Of those, approximately 4,283 landowners leased acreage primarily for upland game hunting, including white-tailed deer and wild turkey, while 2,356 leased lands primarily for waterfowl hunting. In 2024–2025, approximately 3.8 million acres were leased for upland game hunting, and 2.6 million acres were leased for waterfowl hunting. Upland game lease acreage declined from the 4.3 million acres reported in 2023–2024, whereas acreage leased for waterfowl hunting increased from 1.4 million acres the previous season. The estimated value of hunting leases in 2024–2025 was approximately \$67 million for upland game and \$73 million for waterfowl. The average lease rate was estimated at \$17.50 per acre for upland game hunting and \$28.40 per acre for waterfowl hunting.

Honey

In 2025, the total number of hives were estimated at 41,703, up from 36,485 in 2024. This increase is believed to be the continuation of the rebuilding phase after the impacts caused by the drought and excessive heat in 2023. The increase in hives along with more typical conditions in 2025 helped to increase total honey production to 2.65 million pounds, up slightly from 2.60 million pounds in 2024. Despite the slight increase in production, total farm gate value was down in 2025 at \$5.4 million from the previous year's estimate of \$6.1 million. This was due to a decrease in the estimated price for 2025 falling from \$2.35 per pound in 2024 to \$2.05 per pound.

Plant Enterprises

The gross farm value of all plant enterprises was roughly \$4.26 billion in 2025, a decrease of 5.2% from the \$4.50 billion in 2024. Value added was \$3.86 billion for all plant commodities during 2025, down by 1.9% from 2024. Total value of all plant crop enterprises to the Louisiana economy was \$8.12 billion in 2025, down from \$8.43 billion in 2024.

Cotton

In 2025, there were 72,558 acres harvested in the state of Louisiana. This was a considerable decrease from the 136,485 acres of cotton harvested in 2024. It was even a significant drop in acreage when compared to the 113,687 acres harvested in 2023. Approximately 56% of planted acres in 2025 were irrigated. Yields across irrigated and dryland acres averaged 1,315 pounds of lint per acre which is higher than the 994 and 875 pounds of lint per acre averages in 2024 and 2023, respectively.

Gross farm value of cotton lint was \$60.9 million in 2025. Cotton seed value contributed an additional \$18.5 million. Gross farm value of all cotton sales was \$79.4 million.

Feed Grains

In 2025, there were 801,479 acres of feed grains harvested in the state, nearly doubling the 488,338 harvested in 2024. All of the increase was attributable to a significant increase in corn acres in 2025. Corn acres increased by over 344,000 acres in 2024. Offsetting the large increase in corn acres was grain sorghum acres that decreased by nearly 31,000 acres and oats acres that were cut in half going from 961 in 2024 to 461 in 2025.

Total gross farm value for feed grains were up sharply at \$651.9 million from \$385.6 million in 2024. The large increase in corn acres was the driver for the increase in gross farm value despite market prices that continued to be pressured lower. Value-added for feed grains was estimated to be \$114.1 million in 2025. When combined with the gross farm value, the total value of feed grain production in Louisiana was estimated to be \$765.9 million in 2025, up significantly from \$453.1 million in 2024.

Corn

There were 792,606 acres of corn harvested in 2025, which was a significant increase from 488,338 acres of corn harvested in 2024. Corn yields in 2025 averaged 187.6 bushels per acre, which was on par with the 186.2 bushels per acre average in 2024. Both 2024 and 2025 yield averages were an increase from 176.9 bushels per acre average from 2023. It is likely this increase was due to consistent rainfall during the 2024 and 2025 seasons in comparison to the severe drought Louisiana corn growers faced in 2023.

Gross farm value of corn production in 2025 was \$648 million which is an incredible increase from the average gross farm value of corn production in 2024 of \$367.4 million. This large increase can be attributed to higher acreage and production. The average price in 2025 is estimated at \$4.36 per bushel as compared to \$4.38 per bushel in 2024.

Grain Sorghum

In 2025, 8,411 acres of grain sorghum were harvested in the state. This is a huge decrease from the 39,380 acres of grain sorghum that were harvested throughout the state in 2024. However, it is more comparable to the 6,554 acres harvested in 2022. Grain sorghum yields in 2025 averaged 103.4 bushels per acre, which was the highest increase in bushels per acre over the last several years. To compare, the average bushels per acre were 97.2, 76.9 and 78 in 2024, 2023 and 2022, respectively. This increase in yield could possibly be contributed to the consistent rainfall that occurred over the 2025 season.

The gross farm value of grain sorghum production in 2025 was \$3.6 million, which is a decrease from the \$18.1 million gross farm value of grain sorghum production in 2024. The reason for this decrease was the huge drop in acres harvested in 2025 by Louisiana sorghum producers.

Oats

In 2025, four producers planted 479.2 acres of oats, compared to eight producers and 960.6 acres in 2024. Harvested acres were 461.4 and 960.6 for 2025 and 2024, respectively. Yields in 2025 averaged 44 bushels per acre with a total production of 23,304 bushels and a value of \$69,237.

Forestry

Louisiana's timber industry in 2025 experienced two very different markets within the same year. The hardwood sector showed steady strength, while pine and pulpwood products faced continued pressure from weak housing demand and structural changes in the paper industry. Total statewide stumpage value reached \$342 million, with delivered mill value totaling approximately \$860 million. The industry remains a significant economic driver for rural Louisiana, contributing around \$11 billion annually to the state economy and supporting approximately 45,000 jobs across forestry and related manufacturing.

Pine sawtimber prices moved through wide swings during the year. After holding steady near \$25 per ton early in the year, prices jumped 16.4% in the second quarter to reach \$29.60 per ton, driven by seasonal demand and temporary supply tightness. This midyear strength did not last. As lumber markets weakened through the summer and fall, pine sawtimber retreated to around \$23.70 per ton by the fourth quarter, finishing the year down about 7% from where it ended 2024. The volatility reflected ongoing tension between abundant standing timber supplies across the South and uneven demand from softwood lumber mills operating well below capacity.

Hardwood sawtimber was the clear standout of 2025. Mixed hardwood prices climbed steadily through the year, posting an 18% year-over-year gain by midyear and reaching above \$41 per ton in the third quarter before settling around \$40 per ton at year end. Oak sawtimber also performed well, trading in the \$42-\$44 per ton range for much of the year. The hardwood strength came from steady demand in furniture, flooring and export markets, along with limited supplies of quality hardwood sawlogs. This strength prompted some landowners and loggers to shift their focus toward hardwood stands to offset weakness in pine products.

The pulpwood market reached crisis levels in 2025. International Paper's Red River mill in Natchitoches Parish closed in April. The closure put the logging industry in disarray, with many operators reporting nowhere for pulpwood to go. Pine pulpwood prices fell to around \$4.43 per ton by year end, down 27% from the prior year, while hardwood pulpwood collapsed to approximately \$5.21 per ton, a decline of over 30%. With the nearest paper mills now often 100 miles or more away, some loggers report leaving pulpwood behind in the woods because it simply does not make financial sense to transport it. The mill closure followed Georgia-Pacific's 2019 closure of its Port Hudson facility, which had already reduced hardwood pulpwood buying in southeast Louisiana. These losses reflect broader structural shifts in the paper industry as mills convert to recycled fiber inputs or close entirely.

Looking ahead to 2026, the outlook remains mixed. Forecasters project housing starts will remain around 1.35-1.40 million units in 2026, with mortgage rates expected to stay above 6%. Pine sawtimber prices are expected to remain in the \$23-\$28 per ton range, with potential for modest improvement if housing activity increases. Hardwood markets should maintain relative strength given diverse end-market demand and Louisiana's competitive positioning. The pulpwood market faces no near-term recovery, as the paper industry's shift away from virgin fiber represents permanent structural change. Landowners managing timber stands should work closely with consulting foresters to optimize harvest timing and explore opportunities when market conditions allow. Despite current challenges, Louisiana's forests continue to grow substantially more timber annually than is harvested, providing a foundation for the industry's long-term future.

Fruit Crops

Fruit production in Louisiana during 2025 was shaped largely by unusual winter weather and subsequent growing season conditions, particularly in the southern portion of the state. On Jan. 21, 2025, a rare snow event brought severe cold temperatures across south Louisiana, in some cases lower than temperatures recorded farther north. This event resulted in significant cold injury and plant loss, especially in citrus, and influenced production outcomes for several perennial fruit crops.

Following the January freeze, spring weather was characterized by regular rainfall and persistently cooler than average temperatures, which delayed crop development statewide. While moisture availability was generally adequate, extended cool conditions slowed growth and postponed harvest timing for a number of early season fruit crops.

Citrus

Citrus production was among the most heavily impacted sectors in 2025. Freeze damage from the January event compounded long standing challenges associated with citrus greening, canker, and repeated cold injury in recent years. In 2025, citrus acreage totaled approximately 147.9 acres, including 91.7 acres of satsumas, 23.4 acres of navels, and 32.8 acres of other citrus types. In addition to trees lost directly to cold injury, some growers chose not to replant citrus, while others diversified into alternative crops, contributing to continued structural contraction of the citrus industry. Total citrus gross farm value was estimated at approximately \$1.13 million.

Strawberries

Strawberry production, concentrated primarily in southeast Louisiana, faced a challenging season in 2025 due to the combined impacts of the January freeze and a cool, wet spring. While widespread use of row covers helped limit catastrophic freeze damage, cooler temperatures slowed early growth and resulted in delayed harvest timing across much of the production region. Harvested strawberry acreage was estimated at 180.3 acres, slightly below 193.0 acres in 2024. Persistent rainfall increased disease pressure, particularly crown and foliar diseases, requiring intensive management and contributing to reduced yields in some fields. Despite these challenges, strawberries remained one of the state's highest value fruit crops, with gross farm value estimated at approximately \$11.79 million, supported by strong retail demand and direct market sales.

Blueberries

Blueberry production expanded in 2025, with harvested acreage increasing to approximately 554.5 acres. Favorable pricing and strong demand continued to support the industry, with gross farm value estimated at approximately \$11.63 million. While production conditions varied by parish, blueberries remained one of the leading fruit crops statewide by both acreage and value.

Mayhaws

Mayhaw production remained a significant specialty crop in Louisiana during 2025. Native mayhaws accounted for approximately 183.0 acres, while orchard systems totaled 154.06 acres, reflecting continued interest in managed production. Following rapid expansion in recent years, overall mayhaw acreage stabilized, as crop losses experienced during the 2023 season caused some producers to expand more cautiously. Cool spring conditions delayed ripening and extended harvest windows in some areas. Combined gross farm value for native and orchard mayhaw production was estimated at approximately \$2.29 million, supported by steady processing demand and value added markets.

Blackberries

Blackberry production remained stable in 2025, with harvested acreage estimated at 106.2 acres. Gross farm value was estimated at approximately \$2.54 million, reflecting steady demand and favorable pricing in fresh market and local sales

channels. Blackberries were less affected by the January freeze than many tree fruit crops and continue to be a viable diversification option, particularly in Central and northern Louisiana.

Other Fruit Crops

Additional fruit crops contributed to overall production, including peaches (127.1 acres; \$719,491), figs (44.0 acres; \$627,860), pears (27.0 acres; \$70,092) and muscadines, which totaled 54.4 acres across fresh and commercial production systems and generated an estimated \$500,367 in gross farm value.

In total, commercial fruit crops were harvested on approximately 1,802 acres in 2025. Despite weather related challenges — including a significant January freeze, delayed spring development, and localized disease pressure — total gross farm value for fruit crops remained strong, driven by strawberries, blueberries, mayhaws and blackberries, as well as continued strength in direct to consumer marketing.

The 2025 season highlighted both the vulnerability of perennial fruit systems to extreme weather events and the adaptability of Louisiana fruit producers, particularly through crop diversification, management adjustments and alternative marketing strategies. Collectively, these trends suggest a fruit industry that is contracting in some sectors, such as citrus, while stabilizing or expanding in others.

Note: Parish-level estimates reflect reported data and may vary in completeness by crop and parish. In some cases, zero values represent nonreporting rather than confirmed absence of production, particularly in minor or outlying parishes.

Louisiana Fruit Crops – Acreage and Gross Farm Value (2024-2025)

Crop	2024 Acres	2025 Acres	2024 Value (\$)	2025 Value (\$)
Strawberries	193.0	180.3	12,184,485	11,788,512
Blueberries	423.9	554.5	8,670,688	11,627,191
Citrus (total)	227.5	147.9	3,317,328	1,130,155
Blackberries	100.7	106.2	4,434,735	2,540,103
Mayhaws (total) ¹	338.4	337.1	2,360,239	2,285,917
Other Fruits ²	262.2	206.5	2,080,924	1,917,811
Total Fruits	1,545.6	1,802.0	33,04,378	31,289,689

¹ Mayhaws (total) includes both native and orchard production.

² Other Fruits include figs, muscadines (fresh and commercial combined), peaches and pears.

Commercial Greenhouse Vegetables

Greenhouse production of vegetable crops provides Louisiana growers with nearly year-round environmental control, optimizing vegetable production. While growers can regulate air temperature, soil texture or soilless media, and precise fertilizer rates through water systems, they remain susceptible to insect and disease pressures. Additionally, nutrient deficiencies tend to manifest early in soilless media. The use of these media also presents challenges for growers seeking time off, as soil moisture is critical in soilless media and hydroponic systems. A single hour without water in a hydroponic system can result in yield loss, while a day can cause crop death. Consequently, greenhouse growers require labor seven days a week to manage their crops.

While greenhouse production of vegetable crops such as tomatoes, cucumbers and lettuce can occur year-round, growers must adjust various aspects of production to maintain optimal yields. For instance, during the fall and winter months, heaters must be operated for tomato production, though off-gasses from certain heaters can cause deformities in fruit and foliage. Reduced natural sunlight may necessitate the use of supplemental lighting. The summer months of July and August pose challenges for lettuce production in greenhouses, requiring cooling systems and higher seeding rates per cell to accommodate

foliage volume before bolting. Consequently, it is common for greenhouse growers to take breaks in tomato production during the coldest, darkest months and in lettuce production during the hottest months, although some growers operate year-round.

The growth rates of lettuce, tomatoes and cucumbers per square foot in greenhouse environments are notable. With proper maintenance and the willingness to manage additional production costs, the yield per unit area can significantly surpass that of field vegetable production. For those deterred by the high costs of greenhouse construction, high tunnels offer a viable alternative. High tunnels are simplified greenhouses where crops are planted directly in the ground rather than in bagged culture or hydroponic systems. High tunnels extend the growing season, allowing producers to initiate warm-season crops two to three months earlier and extend their cultivation into the winter months due to the additional degrees of protection they provide against adverse winter conditions.

There is considerable potential for the expansion of controlled environment agriculture in Louisiana. A significant portion of out-of-season vegetables are imported into the United States annually. The LSU AgCenter advocates increased local greenhouse and high tunnel production to enhance the availability of fresh produce during the off-season. The primary crops cultivated in Louisiana greenhouses include tomatoes, cucumbers, and lettuce. The projected gross farm value of greenhouse vegetables for 2025 is \$1.6 million. Of that value, \$1.1 million is for tomatoes, \$122,834 for cucumbers, and \$344,700 for other crops, predominantly lettuce.

Hay Sold

Hay production for commercial sales is a limited part of the total hay production in Louisiana. Nevertheless, hay produced from 45 acres of alfalfa and 409,706 acres of grasslands was sold by 2,766 producers in 2025. Yields averaged 3 tons per acre from the grasslands harvested for sale and 3.3 tons per acre from the alfalfa harvested for sale. Production included 1,245,993 tons of grass hay and 147 tons of alfalfa hay. Compared to numbers reported in 2024, the acreage of grasslands used for commercial hay production decreased by 22.6%.

Weather conditions were conducive for optimum hay production during much of the growing season in 2025. However, some regions in central and north Louisiana did have dry conditions during the late-summer months. Overall, grass hay yields were similar in 2025 as compared to 2024. Gross farm value of all hay sales, including some minor alfalfa production, was \$167 million, which was a decrease of 35.7% from the previous year. This decrease in gross farm value for hay production was likely due to the lower acreage devoted to hay production in 2025 as compared to 2024.

Home Vegetable Gardens

In typical years the number of home gardens fluctuates greatly with people's interest and the economy. When economic conditions are weak there tends to be additional interest in producing their own food in the face of rising food costs. Also, with the conditions created by the covid pandemic in 2020 and 2021, there was a renewed interest in home gardens. The National Gardening Association found that 19 million new gardeners were gained during the COVID-19 pandemic.

Vegetable gardening not only provides food but is also reported to reduce stress and provide a mental break from the day. Research conducted by the U.S. Department of Agriculture indicated approximately one in three households have some kind of garden, including backyard fruit trees, vegetable plots, berry patches, etc.

With this assumption of a garden for one in every three households, a methodology based on parish population data was developed to estimate the number of gardens in each parish of the state. Louisiana population in 2024 was estimated at 4.60 million people. Assuming 2.6 people in every household, the total number of households in the state is approximately 1.77 million. Further, assuming roughly 35% of the households have home gardens, translates into a total of roughly 619,000 home gardens in the state. Based on the USDA study, the average value of a home garden was roughly \$525 in 2008. Using annual price changes of a mix of vegetables and fruits that would be believed to be grown in the typical Louisiana home garden, that estimated value from 2008 is adjusted annually to estimate a current value of home gardens. For 2025, the estimated value

of a home garden was calculated at \$622. Given these assumptions, the estimated gross farm value of home vegetable gardens was estimated at \$385 million.

Nursery Crops

Louisiana's nursery industry produces woody ornamental plants (i.e., trees and shrubs), herbaceous perennials, annual plants and floriculture crops, as well as some edible stock (i.e., fruit and nut trees). Several successive years of unusually cold winter conditions impacted landscape plants, notably late spring frosts damaging emerging growth from sensitive species and, at times, the mortality of tender perennials.

This yielded the opportunity for retail garden centers to have a strong 2025 at the storefront with regards to replacing winter damaged plants (from the past several years). Many retail garden centers reported modest gains in sales (2%-5%) in 2025 versus 2024, whereas others maintained similar revenues to past years or slight declines. In brief, 2023 sales served as a recent high-water mark; whereas 2024 saw a slight decline (which may have been impacted by the 2023 drought affecting inventory, inflation raising costs and election year impacts on consumer spending habits). Fortunately, Louisiana nursery growers have diversified planting stock (at different stages of growth) and utilize a range of best management practices to protect plants.

Labor concerns remain a priority for green industry stakeholders, and efforts to recruit, retain and train new individuals are working towards addressing this. Winter protection practices (in the nursery and the landscape) and identifying resilient ornamental varieties for the landscape remain as other major areas of interest to the industry. Nursery stock inventory has fluctuated for the past several years with pandemic-induced sales (and material supplier factory shutdowns) followed by several winters with freezing events limiting inventory. Currently, inventory reports reflect that multiyear supply concerns have stabilized and demand is consistent. The Louisiana green industry had a profitable 2025 and has a favorable forecast for sales based on early spring 2026 reports.

Peanuts

In 2025, seven producers planted 3,753 acres of peanuts compared to five producers and 2,984 acres in 2024. Harvested acreage was 3,753 and 2,984 for 2025 and 2024, respectively. Yields averaged 6,828 pounds per acre in 2025 compared to 5,254 pounds per acre in 2024. Total production was 25,633,500 pounds with a value of over \$7.2 million. Stem rot and limb rot continue to impact peanut fields and increase input costs associated with fungicide applications.

Pecans

The 2025 pecan season was characterized by variable production across regions and cultivars, reflecting alternate bearing patterns and late season environmental stress. In total, pecans were harvested from approximately 17,363.6 acres statewide, including 9,147.3 acres of improved cultivars and 8,216.3 acres of native pecans.

In south Louisiana, several orchards dominated by the cultivar Elliot experienced an off year, contributing to reduced yields in that region. Although alternate bearing is expected in pecan production, the magnitude of the off cycle was influenced by prior stress and growing season conditions.

Dry weather during late summer and fall limited soil moisture in some orchards, particularly those without irrigation, resulting in reduced nut fill and smaller kernel size. In many cases, nut set earlier in the season did not fully translate into expected kernel quality at harvest. At the same time, drier conditions helped suppress pecan scab pressure, allowing some cultivars with moderate susceptibility to perform acceptably under low input management systems.

Total gross farm value for pecans in 2025 was estimated at approximately \$6.59 million, including \$4.71 million from improved cultivars and \$1.88 million from native pecans. Wholesale pecan markets remained under pressure from global

supply and imports, while direct to consumer and retail sales continued to provide stronger returns for producers able to market locally.

Looking ahead, cultivar selection, orchard age, moisture management and adaptive practices will remain critical factors shaping the long-term viability of pecan production in Louisiana, particularly as weather variability increases.

Note: Parish level estimates reflect reported data and may vary in completeness by crop and parish. In some cases, zero values represent nonreporting rather than confirmed absence of production, particularly in minor or outlying parishes.

Louisiana Pecan Production – Acreage and Gross Farm Value (2023-2025)

Year	Improved Acres	Native Acres	Total Acres	Improved Value (\$)	Native Value (\$)	Total Value (\$)
2023 (On Year)	9,636.0	9,871.4	19,507.4	5,312,535	2,307,779	7,620,314
2024 (Off Year)	9,210.2	9,907.2	19,117.4	4,529,389	2,451,922	6,981,311
2025 (Transition)	9147.3	8,216.3	17,363.6	4,714,025	1,879,610	6,593,634

Although pecan production typically follows a biennial alternate bearing pattern, production in 2024 and 2025 reflects two consecutive lower output years, with the expected rebound in 2025 constrained by cultivar specific cycling (Elliot) and late season moisture stress

Rice

Rice remains an extremely important crop in Louisiana agriculture, ranking among the top four in acreage and value. Approximately 473,331 acres were planted in 2025. The Rice Variety by Parish Survey conducted annually by extension agents indicated that Louisiana planted 86.6% long grain and 12.5% medium grain in 2025 compared to approximately 90.5% long grain, 9.5% medium grain in 2024.

The 2025 Louisiana rice crop was shaped largely by challenging weather conditions early in the planting season. Planting in south Louisiana was delayed by cold temperatures, and after an initial period of planting, two freezes halted progress. Rice that had already been planted experienced slow emergence, reduced seedling vigor, stand losses, and, in some cases, herbicide injury due to limited growth under cool conditions. Recovery was uneven, and some early planted fields never fully regained yield potential. In north Louisiana, persistent cold and wet conditions delayed planting well beyond normal. Frequent rainfall continued during and after planting, resulting in periods of seedling submergence and poor stand establishment. Some fields required replanting, while several thousand acres were ultimately not planted due to the narrow planting window created by unfavorable weather. Midseason conditions remained variable across the state. Early harvests in south Louisiana reported strong yields, creating optimism for a productive year. However, yields declined in some areas as harvest progressed, while certain later fields performed better than expected. Extended periods of rainfall and cloud cover during key reproductive stages reduced solar radiation, negatively affecting crop growth and contributing to yield losses in some fields. Poor weather during pollination likely resulted in sterility in certain situations. The most significant development in the 2025 season was the detection of the rice delphacid between late July and October. Initial reports of infestation and damage to rice came from northeast Louisiana in August and moved southward in the following months. Overall yield impacts to the industry were minimal as many fields were soon to be harvested when infestations started. However, there were isolated reports of significant yield losses up to 40% and even several hundred acres left abandoned. It was estimated that nearly every rice field still waiting to be harvested in the months of September and October were infested with rice delphacid.

Ratoon crop production in southwest Louisiana was variable but contributed meaningfully for many producers, with average yields estimated at 15 to 18 barrels per acre and some areas reporting higher yields. The ratoon crop in 2025 helped to support the overall state average yield at 47.2 barrels per acre (7,642 pounds). Overall, despite early season planting challenges, variable midseason conditions, and harvest difficulties, the 2025 rice crop performed reasonably well under difficult conditions.

In 2025, the statewide rice average yield was estimated at 7,642 pounds per acre (47.2 barrels or 169.8 bushels per acre), up from 7,705 pounds per acre in 2024. Nearly 36 million hundred weights of rice was produced on 469,956 harvested acres in 2025. The gross farm value in 2025 for rice produced was \$464.0 million, down from \$534.9 million in 2024. When value added activities of \$154.5 million are considered, the total economic impact of the rice industry was estimated at \$618.5 million, down from \$713.1 million in 2024.

Sod and Turfgrass Production

During 2025, sod was produced by 14 Louisiana sod farmers on 1,999 acres compared to 11 producers farming 1,942 acres in 2024. This marks a small increase in the number of acres and sod producers in the state. Overall numbers seem relatively stable.

Zoysia sod production in Louisiana is continuing to gain popularity as demand for durable, lower maintenance turfgrasses increases. Centipedegrass continues to dominate the market, followed by zoysia, St. Augustinegrass and 419 bermudagrass. Less St. Augustinegrass is being grown as the popularity of zoysia increases.

Louisiana producers continue to compete with sod shipped in from out of state, specifically, southwestern Mississippi and southern Arkansas. Some of this out-of-state sod has raised concerns about quality. Labor also remains a serious issue across industry, with many farms struggling to find reliable help.

The gross farm value of sod and turfgrass sales in Louisiana during 2025 was estimated at \$20 million, compared to \$21.6 million in 2024. Value-added activities were estimated at \$15.0 million, for a total industry value of \$35 million in 2025, down from \$37.8 million in 2024.

Soybeans

In 2025, 787,488 acres of soybeans were planted by 1,157 producers. A total of 784,602 acres were harvested with an average yield of 53.8 bushels per acre. The total production for soybeans in 2025 was 42.2 million bushels. In 2025, there was a decrease of 17.1 million bushels of soybeans produced compared to the 2024 cropping season. At \$10.45 per bushel, the average unit price for soybeans in 2025 decreased \$0.71 per bushel from 2024.

In 2025, farmers planted 70% of soybeans before May 1, well above the five-year average of 40%. Early rain and wind caused low stands, weed issues and sandblasting. Continued rainfall reduced irrigation needs and supported yields.

Sugarcane

In 2025, sugarcane was grown on 543,549 acres in 25 Louisiana parishes. An estimated 502,724 acres were available for harvest. The 11 raw sugar factories in the state processed 17,944,640 tons of sugarcane. The average yield of cane produced from each harvested acre was 35.7 tons per acre. The average sugar recovery at the sugar factories was 248 pounds of sugar (96° pol) per ton of cane. The yield of commercially recoverable sugar produced per harvested acre was approximately 8,847 pounds. Total sugar production for 2025 was 2.224 million tons (96° pol).

Growing conditions in 2025 were more seasonal following severe freeze events in mid-January and mid-February. A low temperature of 4 F was recorded at Lafayette Airport on Jan. 22. Spring conditions were relatively dry, with rainfall near normal levels. As a result, spring cultivation, herbicide applications and fertilizer applications were completed in a timely manner. Disease pressure from brown rust remained low throughout the season.

Summer rainfall patterns were favorable, contributing to excellent sugarcane growth. Insect pressure was higher than normal, particularly from stalk borers in western parishes. An outbreak of West Indian caneflies was also observed, requiring

treatment on significant acreage. A Section 18 emergency exemption was granted for Sivanto Prime insecticide (flupyradifurone) for canefly control.

Harvest began on Sept. 15, 2025, at the Alma Mill and concluded on Jan. 13, 2026, also at Alma. The predominantly dry conditions during harvest accounted for excellent sugar recoveries and a less expensive harvest and processing season. The 2025 sugarcane variety census had L 01-299 as the dominant variety, accounting for 54% of total planted acreage. Other widely grown varieties included HoCP 14-885 (16%), HoCP 09-804 (8%), and Ho 12-615 (6%).

Raw sugar and molasses prices were slightly lower than in 2024.

Sweet Potatoes

Louisiana sweet potato producers planted an estimated 5,407 acres during the 2025 production season, consistent with acreage levels observed over the past several years. Production remained concentrated in northeast and central Louisiana, with West Carroll, Franklin, Morehouse, Acadia and Avoyelles parishes accounting for the majority of the state's sweet potato acreage. The crop continued to be divided between fresh and processing markets, with approximately 39% of acreage intended for fresh market and 61% for processing.

Weather conditions during the 2025 growing season were generally favorable, though early planting was challenged by wet conditions across much of the state. Frequent rainfall in May prolonged field preparation and delayed planting for some growers; however, timely windows between rainfall events allowed much of the crop to be transplanted under excellent soil moisture conditions. Unlike the previous season, favorable rainfall patterns extended into early June, supporting improved establishment of both early and later plantings. As a result, the majority of the state's crop was successfully established and progressed well early.

As the season advanced, producers reported lower-than-average insect pressure; however, weed control remained a challenge, as growers continue to seek alternative management options due to limited chemical control tools available for sweet potato production. Despite these challenges, overall crop conditions across much of the state was reported as good.

Regional weather patterns influenced crop development during the latter portion of the season. North Louisiana experienced moderate temperatures and adequate moisture through much of the growing period, while portions of south Louisiana encountered drier conditions later in the season. High levels of irrigated acreage helped mitigate moisture stress where rainfall was limited. Only brief periods of extreme heat were reported, reducing the risk of heat-related stress during critical stages of storage root development. Conversely, while Louisiana reported strong yields in 2025, overall U.S. sweet potato production was challenged due to unfavorable growing conditions in other regions, contributing to market shortages entering 2026.

Overall, the 2025 sweet potato crop produced record yields for Louisiana, with the state average coming in at over 524 bushels per acre. Louisiana sweet potatoes continued to benefit from strong market demand, particularly in the fresh market sector. The farm gate value for sweet potatoes in 2025 was estimated at \$45.8 million, with \$19.6 million from processing and \$26.2 million from the fresh market. Moving into 2026, initial reports suggest that sweet potato acreage will align closely with that of 2025.

Vegetables, Commercial

Louisiana vegetable producers represent a diverse and industrious community. The size of farms across the state varies significantly, with both part-time and full-time growers earning sustainable incomes on farms ranging from one to several hundred acres. Most vegetable farms in Louisiana are between 5 and 10 acres in size. Smaller farms are typically family-run and operated, while larger farms often employ external H-2A labor.

Many Louisiana farms grow a variety of vegetable crops rather than specializing in just one type. Louisiana-grown vegetables are available at roadside stands, farmers markets, Community Supported Agriculture (CSA) subscriptions, directly from farms, local grocery stores and food banks. Additionally, many vegetable producers in Louisiana are incorporating agritourism into their operations. You-pick activities, corn mazes and on-farm stands are becoming increasingly popular tourist attractions for residents.

In 2025, the total gross farm value of all vegetable crops in Louisiana was estimated at \$72.9 million. The top three vegetable crops in terms of gross farm value were watermelons at \$22.8 million, tomatoes at \$11.1 million and okra at \$7.9 million.

Wheat

There were 55 producers that planted 15,148 acres in 2025, compared to 55 producers and 18,665 acres in 2024. Wet conditions in some areas resulted in delayed planting. Harvest conditions varied across the state, but overall conditions were good. Harvested acres were 13,706 and 17,921 for 2025 and 2024, respectively. Average yield was 55.4 bushels per acre in 2025. Total production for 2025 was 759,165 bushels. Total crop value was \$3.86 million. Disease pressure from scab (*Fusarium* head blight) and other foliar diseases were not severe.

2025 Progress Report
